

Data entry form validation using Swift programming code. Modify the data entry form hand out sheet that was given to you on Friday. The new form should include the following new fields and the validation process for each of the fields.

<u>TEXT FIELD</u>	<u>Validation Needed</u>
1) Company Name	<u>At least 5 characters in length</u>
2) Address	<u>At least 5 characters in length</u>
3) City	<u>At least 5 characters in length</u>
4) State - Abbreviation (2 Chars, ie. NY, ...)	<u>Must be one of 50 valid codes</u>
5) Zip code	<u>5 characters and only DIGITS</u>
6) Phone Number	<u>10 characters and only DIGITS</u>
7) Email address	<u>At least 5 chars, a "@", "." char</u>
8) Mobile Phone	<u>10 characters and only DIGITS</u>
9) Mobile Carrier	<u>Verizon, AT&T, T-Mobile are valid</u>
10) Username	<u>At least 10 chars, no blank chars</u>
11) Password	<u>At least 10 chars, one upper case</u>
12) Re-Enter Password	<u>Items #11) and #12) MUST match</u>

Create @State variables for all of these data entry items. When all have passed their validation test then output in the rectangle a message saying "New Customer was Added"

Email swiftUI, Swift programming code and a screenshot of the simulator display to Kevin Kairouz, the TA for this class. His email will be given in the Bb -> Announcements. Thank you.
